The most lightweight and stylish folding mobility scooter is redefining independence

Whether exploring abroad or handling your daily routine, the ATTO SPORT keeps you moving.

Everyday Freedom

Mobility scooters keep you independent, making daily life easier and more enjoyable. From errands to visiting friends, they help you stay active and connected. Mobility scooters open new opportunities and let you enjoy life your way.

Life Without Limits

Folding mobility scooters offer a lightweight, compact design that fits in car trunks, on planes, and cruises. They are easy to store and perfect for travel and everyday use. Whether exploring new places or handling errands, folding scooters provide convenience, independence, and the freedom to go anywhere.

The ATTO SPORT folding travel scooter delivers a perfect blend of style, innovation, and performance. It is designed for those who value independence and sophistication

Compact Convenience

The ATTO SPORT transforms effortlessly from a full-sized scooter to a compact trolley in seconds, making it perfect for travel, quick storage, and easy transport wherever life takes you.

Effortless Portability

The ATTO SPORT's innovative design separates into two lightweight parts, with the heaviest **weighing only 37 lbs.** It's easy to lift, store, and transport in the trunk of a car.

Unmatched Comfort

The ATTO SPORT has an ergonomic and adjustable seat and handlebars, crafted to ensure a smooth ride every time, even on longer journeys.

Sleek and Stylish

The ATTO SPORT redefines mobility with a sporty, elegant design that looks as great as it feels. Its modern aesthetic and 3-wheel agility let you navigate tight spaces, and it is equipped with **electronic stability control for added safety on descents and turns.**

Airline Approved Battery

The ATTO SPORT is equipped with a TSA-approved battery. Its compact size and optional split mode make it the only mobility scooter that can fit in the aircraft's overhead compartment.

Reliable for Every Adventure

With a driving range of up to **12.5 miles** (extendable to **25 miles** with the XL battery), a **6.2 MPH top speed**, a **weight capacity of 300 lbs**, flat-free, shock-absorbing tires, and **4-inch ground clearance**, it is ideal for air travel and outdoor exploration and built for longevity.

Front and Rear Lights

ATTO SPORT's powerful front and rear LED lights enable riding in dark conditions.

It's Never Too Soon

Time waits for no one, so why should you? There's no better time to reclaim your mobility and make the most of every moment.

Don't wait! Call now and buy your ATTO SPORT and receive a free front/rear basket and phone holder, a \$184 value.

Why Choose Movinglife?

- Free in-home demos
- Exceptional service
- Flexible payment plans
- Expert Technicians
- Multi-location service network
- Industry's most comprehensive warranty
- Personalized solutions
- Trusted by 60,000+ users
- Global showrooms & service in 62 countries

Speaking of Long Commutes
By Erica Flocke

Among the Trees

Big Jake, the mascot of the Texas State Forest Festival, demonstrates ax throwing.

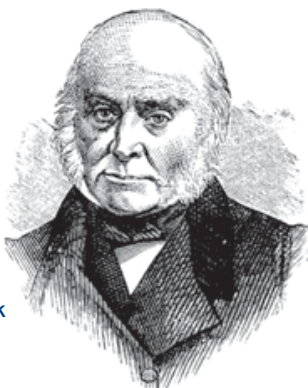

WHEN THE FOUR-DAY Texas State Forest Festival kicks off September 17 in Lufkin, it continues a tradition that began in 1938. The event, in the heart of the Pineywoods, features a variety of activities, including a carnival, barbecue competition, music and chain saw carving.

In 2022, Texas sawmills produced enough lumber to make two-by-fours that could reach the moon and back.

Did you know? Texas has 59 million acres of forestland, more than any other state except Alaska. About 93% of that is privately owned.

Hair Apparent

Only five elected American Presidents—John Adams; John Quincy Adams, right; Martin Van Buren; James Garfield; and Dwight Eisenhower—were bald or balding. Considering that 85% of men suffer hair loss by age 50, that's perhaps an astonishing record. Something to think about on **National Bald is Beautiful Day, September 13.**

MAKING **SPACE** FOR EVERYONE

BY MELISSA GASKILL • PHOTOS BY TIFFANY HOFELDT

THIS PAGE The wonders of the night sky are always accessible at the Burke Baker Planetarium in Houston.

OPPOSITE, FROM TOP With more than a dozen planetariums around the state, visitors have access to celestial sites that can stir the imagination. Burke Baker was one of the first planetariums in Texas when it opened in 1964.

Light pollution blotting out the stars? Head to your local planetarium

In the 1950s, Harlingen Air Force Base used a domed planetarium building to teach pilots navigation by the stars. When the base closed in 1962, the building was donated to what is now the University of Texas Rio Grande Valley, and it eventually fell into disrepair.

But in 2008, H-E-B funded renovations that added a digital projector system and, in 2012, a new dome. Now regular folks of all ages can visit and get a front-row seat to the stars in Edinburg.

“H-E-B asked that it be free and open to the public,” says Christian Hernandez, program specialist at the UTRGV planetarium. “They wanted to inspire a new generation, and I think they made good on that desire.”

The Milky Way shines high above in September, with the constellation Pegasus rising in the east. Venus will be bright in early evening, with Jupiter most visible at dawn. But if it’s cloudy or you live near a big city or industry, you won’t be able to see any of it.

At a planetarium, you can enjoy these constellations and planets as well as other astronomical wonders from a comfy chair with no worries about light pollution from cities or satellites, cloudy skies, heat or cold, bugs, or the hard ground. And in Texas—with at least 15 permanent planetariums

across the state—chances are good that there’s one just down the road from you and with technological advances you might not expect.

Space Over Time

The first modern planetarium opened in Munich, Germany, in 1925, displaying 4,500 stars and the planets of our solar system. Five years later, the first facility in the U.S., the Adler Planetarium, opened in Chicago. More quickly followed in Philadelphia, Los Angeles and New York City. Texas got its first, Fort Worth’s 40-foot-diameter Noble Planetarium, in 1955, and soon Houston and Abilene had their own.

Planetarium popularity soared after the Soviet Union’s Sputnik 1 satellite launched in 1957 and during the 1960s race to the moon. These days, as artificial light drowns out more of the night sky, folks flock to planetariums to see what they’re missing outside.

Those early planetariums used mechanical star projectors that beamed light through slides patterned with tiny holes to depict celestial bodies on a domed ceiling. Gears and motors simulated the movements of stars and planets, creating astonishingly realistic night skies.

Such machines, made by Zeiss, a German company that produced the original Munich projector, and Pennsylvania-based Spitz Laboratories, which developed its first system in the 1940s, remain in use at many planetariums.

But now most facilities have digital projector systems that

Sunset at the Burke Baker Planetarium, where, indoors, it can always be nighttime.

“Under the dome, phenomena that can seem abstract or distant become tangible and awe-inspiring. It’s like a time machine, looking back at how the universe was.”

blend multiple high-resolution images into an uninterrupted scene covering the entire dome. These systems can produce the likenesses of millions of stars and extremely detailed 3D objects and events in deep space. Advances in sound and control systems and improved dome surfaces help make planetarium experiences even more immersive and realistic.

For example, the Stephen F. Austin State University Planetarium in Nacogdoches, which opened in 2018, features a state-of-the-art 4K Digistar system, says Director Dan Bruton.

Abilene’s Morgan Jones Planetarium upgraded in 2004 from its original Spitz Star Projector to a digital projector, says Jason Barber, planetarium director, and in 2019, it installed a laser system.

“With modern projectors, you can go into the stars, you can model the entire Milky Way,” Barber explains. “It’s kind of like a video game, but the shape of a dome creates a 3D effect, so you feel like you’re there. It’s like being in a spaceship.”

Beyond Space

Nowadays, planetarium experiences go well beyond tours of the night sky, popular as those are. You can fly visually through space and time and view immersive films about the Great Barrier Reef, dinosaurs or Mars. Experience a laser light show set to music from artists like Pink Floyd, Queen and Taylor Swift.

The H-E-B Planetarium in South Texas shows educational films about space, Hernandez says, and others just for entertainment.

Bruton says SFASU designed its planetarium to connect the university with its East Texas community and make science accessible and engaging for all ages. Astronomy students at the university keep track of what’s currently visible in the sky—perhaps a constellation, planet or comet—and program the Digistar system to show it. Immersive shows include *Dark Universe*, which explores dark matter, dark

energy and the structure of the universe, and *Antarctica*, a dive into one of the most extreme environments on Earth.

Abilene presents monthly public shows, and Barber’s favorite is one produced by the European Southern Observatory in Chile, called *Unveiling the Invisible Universe*. It uses actual time-lapse imagery of stars, not a computer model, he says. Another, *Messengers of Time and Space*, shows how astronomers use land-based telescopes along with space-based facilities like NASA’s James Webb Space Telescope, currently orbiting the sun 1 million miles away from Earth, and Hubble, circling 300 miles above Earth since 1990.

“Planetariums give people a sense of perspective,” Hernandez says. “It’s one thing to talk about the scale of the universe, but that 360-degree dome screen does an amazing job of letting you feel it. Watching a film about searching for the edge of the solar system, it really hits you how big the solar system is.

“Films that go into the universe, dark holes and cosmic matter really put into perspective that we are a blue dot in a grand tapestry of planets and stars. It’s an important and humbling experience.”

Bruton agrees. “Under the dome, phenomena that can seem abstract or distant become tangible and awe-inspiring. It’s like a time machine, looking back at how the universe was.”

So grab one of those comfy chairs at your local planetarium. You’re bound to have a stellar experience. ■

THE FUNGUS AMONG US

The good times just mushroom
when small-town festivals
celebrate local produce

BY PAM LEBLANC • ILLUSTRATIONS BY JIM STARR

I sampled mushroom-flavored soda, chatted with the author of a book about toadstools, admired a roomful of fungus photographs and learned a little about mushroom farming. But the real magic of the Texas Mushroom Festival occurred when I watched a crowd form outside a tent serving portobello mushroom tacos. Was I really still in Texas?

A quick glance at the boots- and hat-wearing folks surrounding me as I strolled the courthouse square in Madisonville assured me I hadn't wandered off course. This city of 4,400, located 40 miles northeast of Bryan, is home to one of several farms operated by California-based Monterey Mushrooms, and in 2005, the Texas Legislature named it the official Mushroom Capital of the Lone Star State.

Madisonville clearly loves fungus, and its annual celebration draws mobs of mycophiles.

The Texas Mushroom Festival is one of dozens of street festivals around the state that celebrate local produce and growers. You can toast tomatoes in Jacksonville, salute strawberries in Poteet and Pasadena, honor onions in Weslaco, praise peaches in Stonewall and Weatherford, recognize rice in Winnie—and a whole lot more.

Many of the events have deep roots in Texas, which is known as a leading producer of specialty crops such as pecans, sweet potatoes, blueberries, watermelons and citrus. Each has its own quirky traditions.

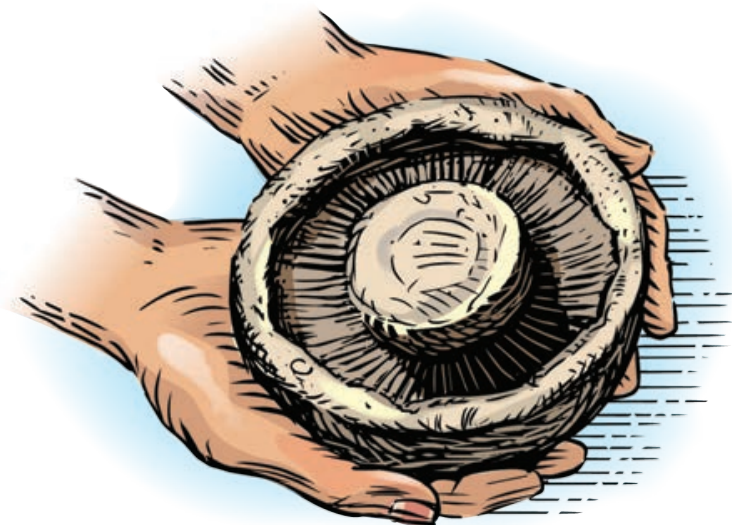

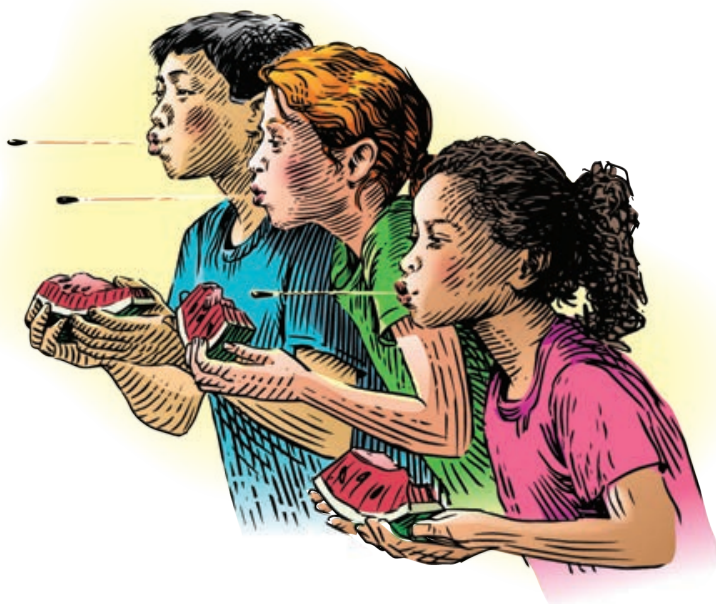

The Texas Citrus Fiesta in Mission, which started in 1932 as a nod to the Rio Grande Valley's winter harvest of grapefruit and oranges, has long included a style show featuring elaborate gowns made from citrus leaves, stems, fruit and peels that have been pulverized, dehydrated, blended and microwaved.

Visitors race to see how many tomatoes they can peel—using only their teeth—at the Jacksonville Tomato Fest. Growers compete to see who can bring the best price for their harvest during the auction at the Poteet Strawberry Festival. The Texas Onion Fest in Weslaco draws more than 25,000 attendees, all who come to celebrate the sweet Texas 1015 onion, the state vegetable of Texas, named for its suggested planting date of October 15.

Washer pitching, mutton bustin' and a full-blown rodeo are part of the action at the Stonewall Peach JAMboree, which also features peach pit spitting and peach eating contests. And at the Luling Watermelon Thump, which dates to 1954, visitors can pucker up for the watermelon seed spitting contest or square off in an (impressively messy) watermelon eating competition.

With all that to choose from, I couldn't resist the idea of spending a fall day in a small town, focusing on something that grows from a microscopic spore into one of nature's most perfect pizza toppings.

The Texas Mushroom Festival officially began in 2001 under a single tent, with a few vendors, a sole musician and about a dozen fungus-themed T-shirts. This year's event, set for October 17, is expected to draw between 10,000 and 15,000 visitors and 150 vendors. The day starts with the Shiitake 5K Run and includes such attractions as a quilt show, an automobile showcase, beer and wine tasting, live music, a kids' zone, silent auction, and mushroom picking contest.

"It just kind of sparked into this monster," says festival director (and confirmed mushroom lover) Dennon Hudson, who was watching the action at last year's event from a sidewalk at the edge of the square, where she waxed poetic about edible fungus. "I love mushrooms any way—fried, grilled, sautéed, raw. And we have lots of pickled mushrooms here as well."

But mushrooms are an acquired taste for some. A few minutes after arriving at the festival on a muggy October afternoon, I spotted Miss Mushroom, Allie Brewer of

Centerville. The 20-year-old pageant winner, wearing a bedazzled silver crown, a rose-colored shirt, gold sandals and a red sash, confessed she doesn't much like them.

"But I'd be up for trying some of them for sure," she added quickly. Then she showed me her finds from a few laps through the festival's mushroom market—a pair of earrings, a shirt and a lavender lemonade snow cone.

Next, I wandered over to the Monterey Mushroom tent, where white, thumb-shaped shrooms sprouted from a mound of soft, dark soil. The farm's growing manager, Armando Juarez, told me that the company's local facility, located about 5 miles south of town, grows white, portobello and specialty mushrooms such as shiitake and oyster. It also makes dried mushrooms. In all, the facility produces more than a half-million pounds of the fleshy, spore-bearing fruits of fungus each week.

"They're extremely healthy," he told me, noting that mushrooms contain vitamin D and potassium. They're also low in calories and rich in fiber.

I learned a few other facts about mushrooms at the festival. Besides coming in handy for cooking—and dang, those portobello tacos were tasty—they're used for medicinal purposes and have been for thousands of years.

At its booth, Viking Farms, based in nearby Normangee, was selling an array of tinctures that purport to ease symptoms of menopause, improve mental clarity and boost recovery from injury. It also was selling a colorful lineup of gourmet mushrooms used for cooking, including pink and blue oysters, black pearl kings, shiitakes, and lion's manes, which look more like softball-sized pompoms than something you'd toss in a sauté pan.

I also learned that unless you're making soup or a liquid-based one-pot meal, you don't have to wash mushrooms. That just makes the caps slimy. Instead, brush off any dirt and wipe them with a damp paper towel.

At another booth I sampled mushroom coffee, which I can only describe as "earthy." (I'll stick to hot tea, thanks.) I perused a display of mushroom honey, a rack of mushroom jerky and bottles of mushroom kombucha. One vendor peddled energy shots made with a root-like fungal structure called mycelium, which looks like a wad of unspooled thread.

I chatted with Alisha Gabriel, author of the picture book *Fungi Are ... More Than Mushrooms*, and spent a few minutes listening to singer Wade Phillips belt out a few numbers next to the courthouse steps.

That's a lot of mushroom madness.

I ended my day at the Texas Mushroom Festival with a full belly and a newfound respect for the funky fungus. Who knew a *lowly* mushroom could do so many things?

The experience reminded me of the importance of Texas agriculture. Food doesn't magically appear in the grocery store; it comes from farms. And Texas farmers work hard to bring their crops to market.

Get out and celebrate them. If you're not into mushrooms, get fired up for Hill Country peaches or East Texas yams. And as a bonus, you'll get a side of small-town Texas, delivered with pride. ■

TAME YOUR TREES

We love our trees, but when branches are too close to power lines, they can cause power outages, fire hazards and other safety concerns.

Here are some rules to follow:

If a tree or a large branch is touching—or falls on—an electric line, call your electric cooperative immediately.

Never trim trees that grow close to power lines; that is a job for professionals. Call your electric cooperative for assistance and guidance.

Use extreme caution when doing any overhead trimming. Branches often fall in unexpected places.

Don't allow children to climb trees or build tree houses close to power lines.

Plant appropriate distances from all power lines.

When planting a tree, consider how tall the tree will grow. At maturity, trees should be at least 10 feet away from power lines.

Your electric cooperative encourages you to always practice safety.

Be prepared before the next power outage.

It's not just a generator.
It's a power move.TM

Receive a free 5-year warranty
with qualifying purchase*

Nominating Committee Report

In accordance with the bylaws of Fannin Electric Cooperative, the nominating committee, duly appointed by the board of directors of the cooperative, met at the cooperative's office in Bonham on July 28, 2026.

The purpose of this meeting was to select nominees for each of the two districts for which director terms are expiring.

The following names were submitted by the nominating committee as candidates for the board of directors:

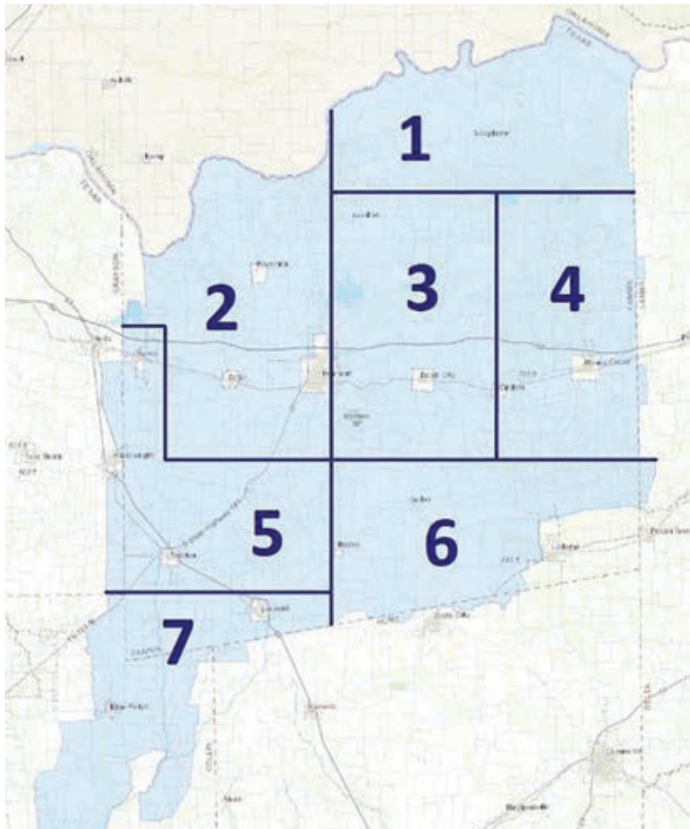

DISTRICT 2

Mark Posey

DISTRICT 4

Seth Mahler

These nominees will be voted on at the annual membership meeting September 26.

OFFICIAL NOTICE

Fannin Electric Cooperative 88th Annual Meeting of Members

The annual meeting of the members of Fannin Electric Cooperative will be held Saturday, September 26, 2026, at the Fannin County Multipurpose Complex, 700 FM 87 in Bonham, with the business meeting beginning at 10 a.m., to take action on the following:

1. Reports of officers, directors and committees.
2. Election of two directors of the cooperative.
3. All other business that may come before the meeting or any adjournment or adjournments thereof.

Seth Mahler

Secretary-Treasurer, Board of Directors
Fannin Electric Cooperative

MESSAGE
FROM
GENERAL
MANAGER/
CEO

JOHN ED
SHINPAUGH

A Labor of Love

EACH SEPTEMBER, WE celebrate Labor Day, a nationwide tribute to the contributions American workers make to the strength and prosperity of our country.

Labor is defined as an expenditure of physical or mental effort, especially when difficult or compulsory. The employees of Fannin Electric Cooperative know that definition well.

When the lights go off—whether due to thunderstorms, wildfires or ice storms—our lineworkers leave their families to work tirelessly in harsh and dangerous conditions to restore your power. Other employees handle phone calls and dispatch crews to get electricity flowing to your home as quickly and safely as possible.

But that doesn't mean the job is a laborious punishment. It's a labor of love.

When the weather gets rough and the calls come in, employees who were safe at home often call in to see if there's anything they can do to help. We've had member service representatives simply show up to help answer calls during a crisis.

Our employees do this because they care about what they do. They care about the membership—their own friends, family and neighbors. And nothing is more important than making sure that every member is safe and sound—with the power humming—even during inclement weather.

And it's not just when the lights are off that our employees work hard. Their dedication is evident every day.

Our lineworkers go through extensive training to ensure their safety and that of their fellow crew members. Along with our office staff, they maintain our system, ensuring you have a reliable flow of power. Fannin EC is always here to educate you about the dangers of electricity, and through *Texas Co-op Power* and other avenues, we pass along tips to help keep you safe and save you money by making energy-conscious decisions.

We don't just do this because it's our job. We do it because we care about you, our members.

Today I want to ask you to thank a co-op worker if you see one. Thank them for their commitment, their talent, their hard work and their service to the membership of this cooperative. After all, even though our offices will be closed September 7 for Labor Day, if your power goes out, we'll be on our way to fix it, holiday or not. ■

NOTICE OF ANNUAL MEETING

Fannin Electric Cooperative 88th Annual Meeting

September 26, 10 a.m.

Dear Member:

You are hereby notified that the 88th Annual Membership Meeting of Fannin Electric Cooperative will be held at 10 a.m. Saturday, September 26, 2026, at the Multipurpose Complex located at 700 FM 87 in Bonham.

At this meeting, director elections will be held for member representatives from districts 2 and 4. For information concerning the election process—including director qualifications, requirements and responsibilities and the nomination process—see the board of directors section of Fannin EC's bylaws. A copy of the bylaws can be found on our website, fanninec.coop, and at the cooperative office.

Prize Drawings

Every member who registers at the door for the 2026 annual meeting will receive a \$10 energy credit that will be applied to the next month's electric bill as well as other gifts. Only one credit per membership will be allowed.

Drawings will be held for additional energy credits and various other prizes donated by co-op vendors. Make sure you bring your card to registration to be entered to win.

There will also be kids' drawings for ages 12 and younger.

We look forward to seeing you at the 88th annual meeting.

What Do Board Members Do?

LOTS OF COMPANIES are guided by a board of directors. But as a co-op, Fannin Electric Cooperative's board is composed of members who know our community and its needs particularly well.

Fannin EC is governed by a board of seven directors. Like you, they're members of the co-op; they live here and get their power from the co-op. They come from across our service territory and have been elected by the membership.

The board of directors is responsible for managing the affairs and direction of the co-op, including decisions about how to responsibly manage the cooperative's budget to carry out our mission of delivering safe, reliable, affordable power. Board members represent the membership and its interests.

The board of directors is also responsible for strategic oversight, considering not only the current status of the co-op but also longer-term trends and planning for the future.

Other responsibilities of the board include:

- ▶ Hiring a general manager/CEO to lead the co-op
- ▶ Setting policies that guide co-op operations
- ▶ Overseeing the cooperative's annual budget
- ▶ Making decisions about the allocation and retirement of capital credits, rates and infrastructure investments

The member-elected and -run board is one of the key components of the cooperative business model, setting Fannin EC apart from other utilities.

Keep reading *Texas Co-op Power* for information about Fannin EC's next director elections. ■

Hunt Safely This Season

WITH THE ARRIVAL of dove season, Fannin Electric Cooperative encourages members to be aware of electrical equipment while hunting. Shooting electrical infrastructure is dangerous and can cause power outages and result in expensive repairs.

Every year, members experience power and internet service disruptions when shotgun pellets hit electric and fiber lines.

Keep these safety tips in mind as you enjoy the great outdoors.

Keep clear of electrical equipment, and don't shoot at or near power lines or insulators.

Be vigilant in wooded areas where power lines may not be as visible.

Never place decoys on power lines or other utility equipment.

Don't shoot at birds perched on electrical wires.

Don't use electrical poles or towers to support shooting equipment or transformer boxes to steady a shot.

Know the effective range of your gun, and always identify your target before putting your finger on the trigger.

Never shoot at sound or movement—assume it's another hunter until you can clearly see an animal. ■

DON'T FUEL THE FIRE

Wildfires can start unexpectedly and move quickly and unpredictably, destroying everything in their path.

Learn how to prepare for and react to dangerous fire events.

If fire is reported nearby:

Place vital records and small items of value in your car and park it facing the direction of escape. Heed evacuation orders.

Clear a firebreak around buildings.

Shut gas off at the meter and turn off propane tanks.

Leave the electricity on, especially if it powers a well.

Turn on sprinklers. Wet down the house and shrubs close to structures.

Follow these home fire safety tips:

Mow grass short. Rake leaves. Clear away debris.

Keep hay bales and firewood away from structures and electric lines.

Make a family evacuation plan. Keep an inventory of home valuables in a fireproof box.

Your electric cooperative encourages you to always practice safety.

Give friends and family the Best of Texas.

Texas Co-op Power has combined favorite recipes from the *Typically Texas Cookbook* and *The Second Typically Texas Cookbook* into one delicious collection.

Keeping Watch

Dedicated volunteers help keep Galveston's beaches a safe haven for fun in the sun

BY PAM LEBLANC • PHOTO BY ERICH SCHLEGEL

A **YELLOW FLAG** flaps from a pole along the Galveston Seawall, a notice to beachgoers that the surf is up slightly and they should stay alert if they venture into the water.

Robert Krout points out the marker, then leads the way down the steps onto a sandy beach streaked with sargassum. As part of the city's Wave Watchers program, Krout and about 30 other volunteers patrol these beaches, monitoring for people in trouble and talking with visitors about how to stay safe.

Krout, retired chair of the music therapy department at Southern Methodist University in Dallas and a part-time ukulele instructor, signed up to attend the city's first Wave Watcher Academy 10 years ago after reading a notice about the program in the Galveston newspaper. He had worked as a pool lifeguard in California and New York and enjoyed strolling the seawall.

As a Wave Watcher, he figured, he could help his community at the same time.

"One of the reasons I moved to Galveston was to be near a beach," says Krout, 70. "It's a great volunteer opportunity and a reason to talk to people."

Wave Watchers spend a week each year in training, where they learn about hazards such as venomous marine life and dangerous currents and how the professional first responders of the Galveston Island Beach Patrol operate. When Krout reports for duty, he wears a yellow whistle around his neck and packs a waist belt with bandages, antiseptic wipes, aloe vera gel, a CPR mask, insect repellent, hand sanitizer and water.

It's early in the season and skies are cloudy, so the beach isn't busy today. But as we walk past two children playing in the surf, Krout's eyes scan the beach, looking for their parents. Once he sees they're paying attention, we move on.

Farther down, we spot a venomous Portuguese man-of-war, puffed up like a blue plastic baggie on the sand. The jellyfish-like creature can deliver a powerful sting, even if it's dead. Krout, who knows fresh water can worsen the pain, carries a bottle of saline to douse any injuries.

Wave Watchers don't enforce beach rules but act as a force multiplier for the beach patrol's guard staff of about 80, says Patrol Chief Austin Kirwin. He hopes to expand the program.

"It's been very beneficial for us, just having local citizens who are already on the beach keeping an eye out," he says. "We train them on what to look for and how to spot a rip current and give beach safety talks."

Galveston sees an average of six to eight drownings each year. Many occur at night, often near places like jetties, where rip currents form. "The more trained eyes we have out there, the better it is for the whole community," Kirwin says.

Unless there's an emergency, lifeguards stay in their stands, where they focus on what's happening in the water. But Wave Watchers can walk the beach, interacting with visitors and dispensing advice, like what to do if you're caught in a rip current. (Don't fight it; let it carry you out, then swim parallel to shore to escape.)

They never enter the water to make rescues and can't provide medication, but they alert Beach Patrol to problems. They also help with crowd control in case of an incident, reunite lost children with their parents and remind beachgoers to tread carefully if they walk on the jetties.

The volunteers concentrate their efforts between the Galveston Fishing Pier and East Beach, a 10-mile stretch that includes Stewart Beach, where thousands congregate on summer weekends.

"They're a huge sigh of relief," says Genevieve Weber, a lifeguard working a stand just west of Pleasure Pier. "Things unfold so quickly out here. Everything happens in a matter of seconds."

For Wave Watchers, it's all about keeping people out of dangerous situations before they happen—and, sometimes, cheering up someone who's having a bad day. For that, Krout carries a pouch filled with shark's teeth he's found on the beach. If you get stung by a jellyfish, he might just hand you one. ■

Robert Krout is one of about 30 volunteers in Galveston's Wave Watchers program who patrol beaches looking for people in trouble and urging safety.

The Line in the Sand

Where does West Texas begin? The 100th meridian, more or less

BY W.F. STRONG • ILLUSTRATION BY THE BRAVE UNION

IF YOU EXAMINE any good map of Texas, you'll notice a natural division of East and West Texas that runs from the eastern edge of the Panhandle down to Abilene and San Angelo and on past Uvalde to Carrizo Springs and Laredo.

On the west side of that line is arid land, and on the east side, it's wetter and greener. It becomes increasingly dry as you go west and wet and humid as you go east.

This line is better known as the 100th meridian, and it maintains this calculus of wet and dry lands all the way up into Canada.

John Wesley Powell, famous for exploring and mapping the Colorado River and the Grand Canyon over 150 years ago, was one of the first conservationists to see that the 100th meridian served as a demarcation.

"Passing from east to west across this belt a wonderful transformation is observed," he wrote. "On the east a luxuriant growth of grass is seen, and the gaudy flowers ... make the prairie landscape beautiful.

"Passing westward, species after species of luxuriant grass and brilliant flowering plants disappear; the ground

TCP Listen as W.F. Strong narrates this story on our website.

gradually becomes naked, with bunch grasses here and there; now and then a thorny cactus is seen, and the yucca plant thrusts out its sharp bayonets."

Powell, for whom Lake Powell in Arizona and Utah is named, would become the head of the U.S. Geological Survey in 1881. He used his knowledge of the West to create a prescriptive map for water management.

Powell took his map to a Senate committee in 1890 and suggested dividing the Western U.S. into water districts that would be managed by the people living along the rivers rather than the states. He advocated for need over greed.

The senators practically rioted, as this flew in the face of the fever dream of Darwinian development that had dominated the Western states. The gold must be mined, the forests harvested, the rivers dammed and the railroads built.

Powell argued for sustainability and good stewardship of the Earth. Powell was against big dams—ironic, given that his namesake lake was created by Glen Canyon Dam. He preferred smaller, more democratic irrigation systems that he believed would be more efficient for the land and serve more people more equitably.

As we know, the arid West was not developed as Powell envisioned, but it's interesting to consider what might have been if Powell had had his way.

What's more interesting to me are the facts on the ground these days. The geological truths that defined the 100th meridian in Texas a century and a half ago are now truer for the 98th meridian, running just west of Fort Worth, east of San Antonio and west of Corpus Christi. This tells us that the Texas water challenges of the future will be far greater than any our ancestors faced. ■

Pancakes and Waffles

Breakfast will never be the same after tasting these morning staples

BY VIANNEY RODRIGUEZ, FOOD EDITOR

Growing up, there was always a jar of applesauce in our fridge. One morning we were greeted with apple pancakes, and I haven't looked at applesauce the same since. These are thicker and cakier than your typical pancake, but isn't cake for breakfast simply sweeter?

Apple Pancakes

TOPPING

4 tablespoons (½ stick) butter,
plus more for serving
2 medium apples, cored and diced
¼ cup brown sugar
½ teaspoon ground cinnamon
1 teaspoon salt

PANCAKES

1½ cups complete buttermilk
pancake mix
1 teaspoon ground cinnamon
1 cup cinnamon applesauce
¼ cup water, plus more as needed

- 1. TOPPING** In a skillet over medium heat, melt butter. Add apples, brown sugar, cinnamon and salt. Cook, stirring occasionally, until the apples start to soften and the sugar is dissolved and syrupy, 3–5 minutes. Remove from heat until ready to serve pancakes.
- 2. PANCAKES** Preheat oven to 200 degrees. In a bowl, combine pancake mix and cinnamon. Stir in applesauce and water until just moistened. If batter is too thick to pour, add water. Preheat and lightly grease a nonstick skillet or griddle over medium heat.
- 3.** Pour ¼ cup batter onto skillet or griddle, repeating as allowed for pan size. Cook each pancake until bubbles form on the surface. Flip and cook until the second side is golden brown, 1–3 minutes. Reduce heat to medium-low if the pancakes are cooking too quickly.
- 4.** Keep cooked pancakes warm in preheated oven, and repeat with remaining batter. Serve warm with butter and reheated apple topping.

SERVES 4

TCP Follow Vianney Rodriguez as she cooks in Cocina Gris at sweetlifebake.com, where she features a recipe for Poblano Breakfast Scramble.

Oatmeal Waffles

BEVERLY ANTHES
FANNIN EC

Anthes' easy waffles are a delicious breakfast. They're crisp on the outside and fluffy inside. Serve warm, topped with fresh fruit or maple syrup.

- 1½ cups flour
- 1 cup quick-cooking oats
- 1 tablespoon baking powder
- ½ teaspoon ground cinnamon
- 1½ cups milk
- 2 eggs, slightly beaten
- ⅛ teaspoon vanilla extract
- 6 tablespoons (¾ stick) butter, melted
- 2 tablespoons brown sugar

1. Preheat oven to 200 degrees. In a large mixing bowl, stir together flour, oats, baking powder and cinnamon.
2. In a small mixing bowl, whisk together milk, eggs, vanilla, butter and brown sugar.
3. Add wet ingredients to flour mixture and stir to combine.
4. Preheat and lightly grease waffle iron. Pour batter into waffle iron, close and cook according to manufacturer's directions. Keep cooked waffles warm in preheated oven, and repeat with remaining batter.

SERVES 6

\$500 WINNER

Sweet Potato Waffles

TRACEY STEWART
SAM HOUSTON EC

This is the most delicious way to transform dinner leftovers into brunch. Hearty, crispy and lightly spiced, I was blown away by these waffles. After testing this recipe, you can surely find me cooking up an extra batch of mashed sweet potatoes to whip up these waffles on the weekend.

- 2½ cups flour
- ¼ cup sugar
- 1 tablespoon baking powder
- ½ teaspoon baking soda
- ½ teaspoon salt
- ½ teaspoon ground cinnamon

- 1 cup mashed sweet potatoes
- 1½ cups buttermilk
- 4 eggs
- 1 teaspoon vanilla extract
- ½ cup (1 stick) melted butter, cooled
- Maple syrup, for serving

1. Preheat oven to 200 degrees. In a large bowl, combine flour, sugar, baking powder, baking soda, salt and cinnamon.
2. In another large bowl, whisk together sweet potatoes, buttermilk, eggs, vanilla and butter.
3. Add the flour mixture to the sweet potato mixture and stir to combine, being careful not to overmix. If the batter is too thick, gradually add 2–4 tablespoons water.
4. Preheat and lightly grease waffle iron. Ladle batter onto waffle iron, being careful not to overfill, close and cook according to manufacturer's directions.
5. Keep cooked waffles warm in preheated oven, and repeat with remaining batter.
6. Serve warm with maple syrup.

Pineapple Upside Down Pancake With Pineapple Cream Syrup

JAN BOX
TRINITY VALLEY EC

Dessert for breakfast? Sign me up! I loved the presentation of these pancakes. They do take a little patience when flipping, but once you get the hang of it, these pancakes are so much fun to make—and even better to eat.

1 can pineapple slices (16 ounces) in syrup
1 cup sugar
4 tablespoons (½ stick) butter
6 tablespoons heavy cream
1 teaspoon salt
1 teaspoon ground cinnamon
2 cups prepared pancake batter
Maraschino cherries, for topping
Whipped cream, for topping

1. Preheat oven to 200 degrees. Drain pineapple slices, reserving syrup. To a

saucepan, add reserved syrup and sugar. Cook over medium heat, stirring frequently, at a soft boil about 25 minutes or until syrup turns golden. Remove from heat and stir in butter, heavy cream, salt and cinnamon.

2. Preheat and lightly grease skillet over medium-high heat. Pour about ⅓ cup pancake batter onto skillet.

Don't Overdo It

Take care to mix pancake or waffle ingredients just until combined. A few lumps in the batter are OK. But overmixing overworks the gluten, which results in a dense pancake. Go easy and enjoy tender, fluffier pancakes and waffles.

—Vianney Rodriguez

3. Cook until bubbles form on the surface of the pancake. Place a pineapple ring into batter and press slightly. Flip pancake and press into skillet and finish cooking. Keep cooked pancakes warm in preheated oven, and repeat with remaining batter.

4. Serve warm with a cherry, pineapple syrup and a dollop of whipped cream on each pancake.

COURTESY CHET GARNER

The Mother of All State Parks

Explore history amid peace and quiet along the Leon River

BY CHET GARNER

EVERYONE WHO VISITS Texas' first official state park feels like they've been let in on a quiet secret. This 400-acre hideaway between Temple and Waco doesn't get the attention (or crowds) of Hill Country destinations like Enchanted Rock State Natural Area or Garner State Park.

But from its quiet perch along the Leon River, Mother Neff State Park waits patiently, like a front porch swing, inviting you to slow down and breathe in some fresh air—and maybe put your phone away for a little while.

The story of this park—and really our entire state park system—goes back to Isabella “Mother” Neff and her son, Gov. Pat Neff. The family owned this stretch of riverfront land that became a local hot spot for picnicking, swimming and fishing long before a “state park” was even a thing. When Mother Neff died in 1921, she made a very Texas-sized decision to leave the land to the state so everyone else could enjoy it too. Not a bad legacy.

I started my visit by hitting the limestone trails, winding beneath a canopy of oaks before dropping into a shady ravine. That's where I found one of the park's rock shelters—massive stone overhangs that Native American tribes used for thousands of years. Turns out, good real estate along the Leon River has always been in demand.

From there, I made my way to the park's iconic stone water tower, built by the Civilian Conservation Corps in the 1930s. The climb to the observation deck on top isn't exactly Mount Everest, but it's enough to earn a view of the sprawling valley below—and justify a solid snack afterward.

Mother Neff State Park may not be the biggest or flashiest, but it just might be the most meaningful—a place where history, nature and a mother's generosity quietly collide. ■

ABOVE Chet at Mother Neff State Park, which used to be the property of Gov. Pat Neff's family. Neff held office in the 1920s.

TCP Watch the video on our website and see all of Chet's Explorations on *The Daytripper* on PBS.

Rodeo

Texans young and old love a rodeo. Despite the pain, the mud and the blood, competition and camaraderie keep us coming back for more. Everyone to the main arena; these fearless competitors are ready to ride.

CURATED BY GRACE FULTZ

Speaking of Long Commutes

Finding silver linings—and snacks—when it's hard to find childcare

BY ERICA FLOCKE

ILLUSTRATION BY
GWEN KERAVAL

"HOW WAS YOUR day today?"

No response. "Did you have fun?" Still nothing.

At the stoplight on Ranch Road 12 and Hunter Road in San Marcos, I laughed to myself and thought about how silly this one-sided conversation must sound. I glanced in the mirror clipped to the backseat headrest and caught my 13-month-old daughter's grin. She can't talk yet, but I can't wait for the day she finally answers back.

I live and work in Wimberley, a town that prides itself on being family friendly. And it is—except when it comes to daycare. There's only one option in town for babies her age, and I've been on the waitlist for more than a year. So every weekday we make the 30-minute drive to San Marcos, where she goes to daycare. That

adds up to two hours of commuting each day: one hour with my daughter, one hour solo.

We've learned to make the most of it. Together we listen to audiobooks and albums I think she should know. While some babies get *The Wheels on the Bus*, mine gets Turnpike Troubadours. I like to tell myself it's making her smarter, or at least building character. Only time will tell.

I narrate the drive like a tour guide: "Look at that bird!" or "We're going over the river." She probably understands none of it, yet she looks at me and smiles like she's clued in anyway.

Some days, traffic crawls along so slowly that I have to break out the emergency snack stash I keep in the car. Fruit bars or a lone teething cookie. By the time we reach the next stoplight, she's happily munching or asleep.

I notice the same cars each morning and afternoon, their drivers as familiar to me as neighbors at this point. I wonder about the people inside. Do they have a baby in the backseat listening to a Lyle Lovett album for the very first time too?

I imagine a tiny community of parents and children, each of us on our own little journey, connected by the same roads, the same traffic lights, the same shared struggle of making it work.

Sometimes I think about it more broadly. In a state as rural as Texas, countless parents are on even longer drives for childcare, and I can't help but wonder how they fill those hours.

I know this is just a phase. We won't be commuting forever, and one day I know I'm going to miss these drives and how my baby smiled at me from the backseat. But for now, I think my daughter knows every curve of Ranch Road 12 better than most grown-ups. When she does learn to talk, she'll probably have plenty to say about it. ■
